

P.E.S. COLLEGE OF ENGINEERING

(AN AUTONOMOUS INSTITUTE)

CHH. SAMBHAJINAGAR-431002

Regular Winter Examination – 2025

Course: F.Y.M.Tech. Branch : Structural Engineering Semester : I
Subject Code & Name: MTPESSE101T– Theory of Elasticity and Plasticity

Max Marks: 60

Date:

Duration: 3 Hr.

Instructions to the Students:

1. All the questions are compulsory.
2. The level of question/expected answer as per OBE or the Course Outcome (CO) on which the question is based is mentioned in () in front of the question.
3. Use of non-programmable scientific calculators is allowed.
4. Assume suitable data wherever necessary and mention it clearly.

(Level/CO) Marks

Q. 1 Solve Any one of the following.

- A)** Derive the stress equilibrium equations in the Cartesian coordinate system, considering no body forces.

Solution:- Marking Scheme

Content	Marks Distribution
Assumptions & element	1
Stress components	1
X-direction equilibrium	3
Y-direction equilibrium	3
Z-direction equilibrium	3
Significance	1

K2/CO1

12

- B)** The state of stress at a particular point relative to the xyz coordinate system is given by the stress matrix.

$$\begin{bmatrix} 15 & 10 & -10 \\ 10 & 10 & 0 \\ -10 & 0 & 40 \end{bmatrix} \text{ MPa}$$

Determine the normal stress and the magnitude and direction cosines of the shear stress on a surface intersecting the point and parallel to the plane by the equation. $2x - y + 3z = 9$.

Solution:- Marking Scheme

Content	Marks Distribution
Calculation of Normal Stress	3
Calculation of Shear Stress	3
Resultant Stress	3
Direction cosines of the shear stress	3

K4/CO1

12

Q.2 Solve Any one of the following.

- A)** Derive the relationships among Young's modulus (E), shear modulus (G), bulk modulus (K), and Poisson's ratio (ν) for isotropic materials. Explain the physical significance of each constant.

Solution:- Marking Scheme

Content	Marks Distribution
---------	--------------------

K2/CO2

12

	Definitions of E, G, K, ν	3												
	Mathematical derivation	5												
	Final relations	2												
	Physical significance	2												
B)	Explain asymmetrical bending of beams with a neat sketch. Derive the expression for bending stress in beams subjected to bending about both principal axes. Solution:- Marking Scheme		K2/CO2	12										
	<table border="1"> <thead> <tr> <th>Content</th> <th>Marks Distribution</th> </tr> </thead> <tbody> <tr> <td>Definition & explanation</td> <td>2</td> </tr> <tr> <td>Neat sketch</td> <td>2</td> </tr> <tr> <td>Stress derivation</td> <td>5</td> </tr> <tr> <td>Final expressions</td> <td>3</td> </tr> </tbody> </table>	Content	Marks Distribution	Definition & explanation	2	Neat sketch	2	Stress derivation	5	Final expressions	3			
Content	Marks Distribution													
Definition & explanation	2													
Neat sketch	2													
Stress derivation	5													
Final expressions	3													
Q. 3	Solve Any one of the following.													
A)	An infinite plate with a circular hole of radius $a = 50$ mm is subjected to a uniform tensile stress of 100 MPa at infinity. Determine: (a) Circumferential stress at the edge of the hole (b) Maximum stress and stress concentration factor Solution:- Marking Scheme		K4/CO3	12										
	<table border="1"> <thead> <tr> <th>Content</th> <th>Marks Distribution</th> </tr> </thead> <tbody> <tr> <td>Given data & assumptions</td> <td>2</td> </tr> <tr> <td>Formula application</td> <td>4</td> </tr> <tr> <td>Calculation of stresses</td> <td>4</td> </tr> <tr> <td>Final answer & SCF</td> <td>2</td> </tr> </tbody> </table>	Content	Marks Distribution	Given data & assumptions	2	Formula application	4	Calculation of stresses	4	Final answer & SCF	2			
Content	Marks Distribution													
Given data & assumptions	2													
Formula application	4													
Calculation of stresses	4													
Final answer & SCF	2													
B)	Explain Michell's problem of a concentrated load acting at the vertex of a wedge. Derive the expressions for stress components and discuss stress singularity at the vertex. Solution:- Marking Scheme		K2/CO3	12										
	<table border="1"> <thead> <tr> <th>Content</th> <th>Marks Distribution</th> </tr> </thead> <tbody> <tr> <td>Problem description</td> <td>3</td> </tr> <tr> <td>Governing equations</td> <td>3</td> </tr> <tr> <td>Stress derivation</td> <td>4</td> </tr> <tr> <td>Stress singularity discussion</td> <td>2</td> </tr> </tbody> </table>	Content	Marks Distribution	Problem description	3	Governing equations	3	Stress derivation	4	Stress singularity discussion	2			
Content	Marks Distribution													
Problem description	3													
Governing equations	3													
Stress derivation	4													
Stress singularity discussion	2													
Q.4	Solve Any one of the following.													
A)	Explain St. Venant's theory of torsion. State its assumptions and limitations, and discuss its applicability to non-circular sections. Solution:- Marking Scheme		K2/CO4	12										
	<table border="1"> <thead> <tr> <th>Content</th> <th>Marks Distribution</th> </tr> </thead> <tbody> <tr> <td>Theory explanation</td> <td>4</td> </tr> <tr> <td>Assumptions</td> <td>3</td> </tr> <tr> <td>Limitations</td> <td>3</td> </tr> <tr> <td>Applications</td> <td>2</td> </tr> </tbody> </table>	Content	Marks Distribution	Theory explanation	4	Assumptions	3	Limitations	3	Applications	2			
Content	Marks Distribution													
Theory explanation	4													
Assumptions	3													
Limitations	3													
Applications	2													
B)	Define warping in torsion. Explain the warping behavior of rectangular and thin-walled open sections with neat sketches. Solution:- Marking Scheme		K2/CO4	12										
	<table border="1"> <thead> <tr> <th>Content</th> <th>Marks Distribution</th> </tr> </thead> <tbody> <tr> <td>Definition of warping</td> <td>3</td> </tr> <tr> <td>Rectangular section explanation</td> <td>4</td> </tr> <tr> <td>Thin-walled open section</td> <td>3</td> </tr> <tr> <td>Sketch AND presentation</td> <td>2</td> </tr> </tbody> </table>	Content	Marks Distribution	Definition of warping	3	Rectangular section explanation	4	Thin-walled open section	3	Sketch AND presentation	2			
Content	Marks Distribution													
Definition of warping	3													
Rectangular section explanation	4													
Thin-walled open section	3													
Sketch AND presentation	2													

Q. 5	Solve Any one of the following.												
A)	<p>Explain the flow theory of plasticity. Derive the plastic strain increment relations using an associated flow rule.</p> <p>Solution:- Marking Scheme</p> <table border="1"> <thead> <tr> <th>Content</th> <th>Marks Distribution</th> </tr> </thead> <tbody> <tr> <td>Concept of flow theory</td> <td>4</td> </tr> <tr> <td>Flow rule derivation</td> <td>4</td> </tr> <tr> <td>Stress–strain relations</td> <td>2</td> </tr> <tr> <td>Applications</td> <td>2</td> </tr> </tbody> </table>	Content	Marks Distribution	Concept of flow theory	4	Flow rule derivation	4	Stress–strain relations	2	Applications	2	K2/CO5	12
Content	Marks Distribution												
Concept of flow theory	4												
Flow rule derivation	4												
Stress–strain relations	2												
Applications	2												
B)	<p>Explain the deformation theory of plasticity. Compare it with the flow theory and discuss their applications and limitations.</p> <p>Solution:- Marking Scheme</p> <table border="1"> <thead> <tr> <th>Content</th> <th>Marks Distribution</th> </tr> </thead> <tbody> <tr> <td>Theory explanation</td> <td>4</td> </tr> <tr> <td>Governing relations</td> <td>3</td> </tr> <tr> <td>Comparison with flow theory</td> <td>3</td> </tr> <tr> <td>Applications & limitations</td> <td>2</td> </tr> </tbody> </table>	Content	Marks Distribution	Theory explanation	4	Governing relations	3	Comparison with flow theory	3	Applications & limitations	2	K2/CO5	12
Content	Marks Distribution												
Theory explanation	4												
Governing relations	3												
Comparison with flow theory	3												
Applications & limitations	2												
*** End ***
